

JAMES
LANDSCAPING, INC.

James Landscaping realizes the dreams of many homeowners by designing and implementing the perfect landscape project. Springtime is a great time to get a jump on your yard and beautify it for summer enjoyment. However, it involves more than just planting a few blooming floral plants. The experts at James Landscaping know and understand the tedious detail involved in designing and requirements for maintaining a beautiful yard.

Rhonda James, a degreed horticulturist, founded James Landscaping in 1989. James describes the process involved in creating new designs. "We spend time talking with our customers to find out exactly what kind of atmosphere they are trying to create. Whether they have a definite idea or not, we use pictures, describe the idea and create a design based on the personal style for each customer."

Cassie Cole, designer, also enjoys working closely with the customer to design the perfect garden creation. Cole said, "Our landscape designs really add value, not only to the home, but to the homeowner as well. Life can be stressful and having a garden to provide enjoyment can really take the edge off."

Understanding the soil, light, and Texas heat are determining factors in how well a plant does. It is difficult for homeowners to have the time to assimilate all of that information. James and her staff use their experience and knowledge to factor in these various components and design plans that work best for each customer's yard. James Landscaping
